

IN THE CLAIMS

Please amend the claims as follows:

1. (original) An electronic apparatus comprising:
 - a screen for displaying a plurality of graphics,
 - scrolling means for changing the location of said graphics under the control of a control means,characterized in that the graphics are disposed in a main-level matrix block and in that, by means of only one command, one of these graphics may be selected.

2. (original) An electronic apparatus as claimed in Claim 1, characterized in that the plurality of graphics comprise at least one graphic of a first type representing various options of the apparatus.

3. (currently amended) An electronic apparatus as claimed in Claim 1-~~or 2~~, characterized in that the plurality of graphics comprises at least one graphic of a second type representing graphics disposed in a secondary-level block.

4. (currently amended) An electronic apparatus as claimed in Claim ~~1 or 2~~, characterized in that the graphics of the first type comprise areas corresponding to a parameter value.

5. (currently amended) An electronic apparatus as claimed in ~~any one of Claims 1 to 4~~claim 1, characterized in that the block is shown in perspective on a first plane whilst the graphics of the first type are shown in another plane.

6. (currently amended) An electronic apparatus as claimed in ~~any one of Claims 1 to 4~~claim 1, characterized in that the block is shown in perspective on a first plane whilst the graphics of the second type are disposed in a block parallel to the first plane.

7. (currently amended) An electronic apparatus as claimed in ~~any one of Claims 1 to 6~~claim 1, characterized in that the graphics of the first type are in the form of a stack of slices forming a column of slices whose appearance changes according to the value which is given to the parameters which they represent.

8. (currently amended) An electronic apparatus as claimed in ~~any one of Claims 1 to 7~~claim 1, characterized in that a text area concerning the graphics displayed on the screen is provided.

9. (currently amended) A method for displaying graphics used in an apparatus provided with a screen as claimed in ~~one of Claims 1 to 6~~claim 1, characterized in that it comprises the following steps:

- arranging graphics in a main-level matrix block,
- allocating a control key for selecting one of said graphics amongst more than two,
- activating a graphics area for activated graphics of a first type,
- deployment of a block of graphics for an activated graphic of a second type.
